

COMMISSIONING SPECIALIST INTERNSHIP

McCOWNGORDON
C O N S T R U C T I O N

Ever wonder how contractors know a system is ready to perform?

Before a building is turned over to its owners, every critical system must be tested, verified, and documented to ensure it operates as intended. That's where commissioning comes in.

As a **Commissioning Intern** at McCownGordon, you'll gain hands-on experience helping evaluate and verify the performance of mechanical, electrical, and plumbing (MEP) systems while working alongside industry experts on real projects.

- Review construction drawings, equipment documentation, and maintenance records.
- Learn how building systems are designed, coordinated, and commissioned.
- Assist with commissioning plans, pre-functional checklists, and equipment inventories.
- Help analyze utility data and support building performance benchmarking efforts.
- Participate in site observation visits and owner training sessions.
- Support the development of project reports that help owners understand how their buildings perform.

If you enjoy problem solving, building systems, data analysis, and seeing how design translates into real-world performance, this internship will give you valuable experience at the intersection of engineering, construction, and building operations.

Help ensure great buildings perform as designed.
