

ESTIMATING INTERNSHIPS

McCOWNGORDON
C O N S T R U C T I O N

Estimating is where construction, technology, and strategy come together.

Estimators analyze project plans, solve complex challenges, explore alternative solutions, and help shape the decisions that drive successful construction projects.

Every great project starts with a smart plan, and estimators help create it.

As an **Estimating Intern**, you'll work alongside our Preconstruction team to learn how projects move from concept to construction. Estimators analyze construction documents, market trends, and cost data to help teams make smart decisions, identify opportunities, and develop winning approaches for complex projects.

- Learn the fundamentals of estimating and preconstruction by collaborating with experienced estimators, preconstruction managers, and operations teams.
- Assist with quantity takeoffs and quantity surveys using industry-leading software.
- Analyze subcontractor bids and learn how teams evaluate pricing and scope completeness.
- Visit project sites to gain a deeper understanding of existing conditions and construction challenges.

If you enjoy problem-solving, strategy, technology, and turning complex information into actionable insights, this internship will give you valuable experience at the front end of the construction process. You'll learn how construction teams evaluate opportunities, build budgets, and position projects for success.

Influence the project before construction begins. Start your career as an Estimating Intern with McCownGordon.
